

Crew Management System EDQEST

redefining future

Crew Management System is a SaaS-based platform built for Non-Scheduled Aviation Operators (NSOPs) in India. It centralizes aircraft, crew, and scheduling management while providing DGCA compliance advisory support.

How It Works

Register operators, aircraft, and crew
Create and manage flight schedules
Assign crew to flights
Maintain aircraft & crew certification records

Key Capabilities

Compliance risk alerts (certificate expiry, flight duty time)
Smart advisory notifications
Centralized crew & aircraft records

Business Impact

Reduced compliance risks
Improved scheduling accuracy
Centralized operational control
Better audit readiness

Ideal For

Non-Scheduled Operators (NSOPs)
Aviation operations teams
Compliance managers
Growing charter aviation businesses

Summary : A centralized aviation operations system that blends flight scheduling with DGCA advisory intelligence for safer, smarter decision-making.

Fleet Management System EDQEST

redefining future

One Platform to Run Your Entire Fleet Fleet Management System is a centralized operational control platform built for transporters and logistics operators to manage vehicles, drivers, vendors, and trips with real-time tracking

How It Works

- Register owned and leased vehicles
- Manage drivers and assignments
- Track vehicles in real time
- Monitor trips and utilization
-

Key Capabilities

- Live vehicle tracking
- Fleet utilization dashboard
- Preventive maintenance alerts
- Vendor-based leasing support
- Role-based access control

Business Impact

- Reduced idle fleet
- Improved trip efficiency
- Better visibility into operations
- Maintenance cost control

Ideal For

- Logistics companies
- Transport aggregators
- Fleet owners
- Vendor-based fleet operators

Summary : An enterprise-ready fleet control system delivering real-time tracking, utilization insights, and operational transparency.

Warehouse Management System

Centralized Inventory & Operations Platform

The WMS helps organizations manage warehouse inventory, inbound/outbound movement, and operational workflows with real-time stock visibility.

How It Works

- Manage inventory centrally
- Track inbound (GRN) & outbound dispatch
- Monitor item-level stock
- Control warehouse workflows

Key Capabilities

- Real-time stock visibility
- Multi-warehouse support
- Movement traceability
- ERP & logistics integration ready
- Secure access control

Business Impact

- Reduced stock mismatches
- Improved accuracy
- Operational efficiency
- Data-driven decisions

Ideal For

- Warehousing companies
- Distribution centers
- Manufacturing units
- Multi-location operations

Summary : A scalable warehouse system that enhances stock visibility and streamlines inbound and outbound warehouse operations.

Driver License Service Portal

Digital Licensing Platform for Transport Authorities

An end-to-end digital system that streamlines appointment booking, knowledge tests, skill tests, and eligibility tracking for state transport

How It Works

- Citizen self-service portal
- Online appointment booking
- Digital knowledge tests
- Examiner-managed skill tests
- Automated eligibility checks

Key Capabilities

- Role-based access (Citizens, Examiners, Admin)
- Automated pass/fail evaluation
- Configurable state-specific workflows
- Audit-ready secure design

Business Impact

- Reduced manual paperwork
- Faster license processing
- Better service transparency
- Improved citizen experience

Ideal For

- State Transport Authorities
- Government departments
- Licensing agencies

Summary : A scalable public-sector platform digitizing the complete driver licensing lifecycle.

Dry Fruits E-Commerce Platform

Modern D2C Commerce Solution

A centralized online commerce system for managing products, inventory, pricing, and customer purchases in real time.

How It Works

- Admin product management
- Real-time stock updates
- Customer storefront
- End-to-end checkout flow

Key Capabilities

- Centralized inventory control
- Real-time pricing updates
- Web storefront optimization
- Integration-ready architecture

Business Impact

- Improved stock accuracy
- Faster order processing
- Reduced manual errors
- Better customer engagement

Ideal For

- D2C brands
- Retail businesses
- Growing e-commerce companies

Summary : A scalable, admin-controlled e-commerce system designed for modern direct-to-consumer brands.

Premium Marble Polishing Booking Platform

A community-focused service booking platform enabling residents of premium societies to book marble polishing services online.

How It Works

- Online service booking
- Schedule selection
- Centralized service management
- Community-specific availability

Key Capabilities

- Premium-focused experience
- Structured booking workflow
- Scalable service operations
- Secure customer interaction

Business Impact

- Reduced manual coordination
- Better service tracking
- Operational transparency
- Enhanced customer experience

Ideal For

- Premium residential communities
- Service providers
- Facility management companies

Summary : A niche service platform that digitizes marble polishing bookings for premium residential communities.
